
Google Friend Connect and Rating/Reviews

Posted by TechJammer - 2009/02/06 09:42

Hi all,

I just installed the Google Friend Connect module and Rating/Reviews mambot. Google Friend Connect was placed in position "user1", which is located in the right-side menu area along side the Joomla login box.

The Rating/Reviews mambot does not have a setting (that I can find) for position. So, currently it appears in the same position on the right-side menu area.

Is there a way to separate these modules, so that the Review/Ratings appear at the bottom of the page?

Also, I added a comment to a single page, but that comment appears on all pages where the Rating/Reviews mambot displays. How do I separate the comments so that each page contains it's own comment and ratings list?

Thanks,

I answered one of my own questions...

When configuring the Rate/Review mambot, I changed the scope setting in parameters to "Page". Initially, it was set to "id", but the now the review is unique for each page.

One last question (for now)...

When a user is not signed in to Google Friend Connect, the review area displays a message "- sign in to post a comment -". But there is no link to a sign-in page provided in the review area.

Should there be a link back to the main page, or is this an oversight in the plug-in?

I'm just curious as to how others are handling that issue.

hi-

this plugin basically autoloading google friend connect script for every content on your Joomla website.

yes, as for now, only have 2 choices:

1. you have to install Joomla mod to accompany the plugin (so user can sign up/sign in via the mod). hopefully in future release from Google, they will put sign in /up button on top of the comment/rating window
 2. click on maximize button link (blue colour) to max the window and you can sign in from there

sunwu,

I assigned the "Friend Connect" sign-in module to all pages. I think that is why the Rate/Review was appearing in the same location on each page.

When I assign the Friend Connect to only the main home page, then the Review / Rate mambot appears at the bottom of the other web pages, where I thought it should be anyway.

Thanks for the info about the sign-in...

I have installed this plugin on the website. But when i enable this plugin it is displly like this which you can see in my attachment.

Can anyone help why is it so.

Thanks

Vikram
