
Adbrite Multimodule install error 1.5RC2

Posted by xyberspam - 2007/09/10 17:49

I've tried to install the adbrite module onto my joomla 1.5RC2 website, however i get the following error messages.

XML Parsing Error at 53:70. Error 4: not well-formed (invalid token)

Any suggestions?

Hi, sorry was away this past few days.

I have tried it on Joomla 1.5 RC2.

You have to enable System - Legacy support.

Steps:

Extensions -> Plugin Manager -> System - Legacy

Then click on Enable column.

After that, try to install Adbrite module again. This time it will work.
