
YouCMSAndBlog WYSIWYG IDE

Posted by cnskanth - 2007/10/04 11:20

hi,

Recently I've downloaded the YouCMSAndBlog WYSIWYG IDE. Now when I try to open the exe file i'm getting the following error-

"The application failed to initialize properly(0xc0000135). Click on OK to terminate the application".

Can anyone help please???

hi,

seems like you havent installed NET 2.0 Runtime, have u ? Download it from Microsoft website here

hi,

Thanks for the quick response.

I do have .NET 2.0 framework installed on my computer, but still i'm getting the same error.

common problem which is caused by .NET runtime normally, incompatible or corrupted during installation.

And ensure must be NET 2.0 but above should be fine.

Got a good article about this problem written by Alex Lowe

Great tool!

Is there any chances for version which works with joomla 1.5 templates?

download taglist for Joomla 1.5.x (Joomla 1.5.1, 1.5.7, 1.5.8) here

ensure you read the readme.txt first for instruction how to install.
