
Friend Connect & Joomla Registered Access

Posted by TechJammer - 2009/02/06 16:05

Hello,

This may be more of a feature request than a problem.

When a user logs into a site using the Friend Connect module, it would really be great if they were then able to access all the features of normal registered users. My understanding of Open Access ID's like this provided that capability.

Is this possible in the current Friend Connect module version, or planned for the future?

Thanks,

hi-

yes, when i developed Friend Connect joomla module, i have a thought whether i should on the same time also develop a joomla component to support OpenID.

at that time i have found some other websites included Joomla Extensions (<http://extensions.joomla.org>) have some open source developers developed this component and you may visit / download to do more test out for the integration.

for this module, it should be transparent for the integration if it s supported OpenID.

if someone has developed it, i will save my time to develop other things :-)

Thanks sunwu,

I'll look around and see if I can find anything useful
