
Multiad AdBrite module

Posted by mgruber - 2009/08/06 02:16

Hi,

After activating the module, the default banner (the banner which appears while gathering data), aligns to the left.

I tried encompassing the module position in a div with align=center (and align=middle), but neither appears to align the adbrite banner into the center.

Any idea how this can be done?

Michael
