
Support on Installer Utility

Posted by viborgip - 2009/12/22 08:40

Hi Users of the YouCMSAndBlog IDE

As the creator of the 'YouCMSAndBlog Installer Utility' (<http://vivociti.com/content/view/81/1/>) I would like to offer you support on using the Utility.

So if you have any questions please post them in this Thread to garanty that I see the post a soon as possible.

Hey,

I'm using your Installer and it works fine, thanks. I've done everything it does without any problem.

Anyway, YouCMSAndBlog IDE wont work on Windows 7. It just doesn't start, generating an error window.

I've tried all that I could, adding to exclude lists of firewall, antivirus, running as Admin, etc.. Nothing work.

As I don't know what kind of access is necessary to make it to work I wanted some advice.

By the way, Im using Wamp & Joomla!, all the latest stable releases.

Thanks in advance.

Hi,

I m running it on Windows 7 now to build most of VivoCiti's free Joomla module :-)

Maybe you can try to upgrade to latest .NET version.

rgds,

sunwu

Thanks for being so quick to help me.

I've tried .Net too. Yet I did it again, now updating the last one (YouCMS asks for 2.0 only).

Windows still show me a message about YouCMS stop working before launch.

I frankly can't understand what's going on.

I'll try a desperate measure now, uninstall everything related, Wamp, Joomla!, YouCMS, the launcher etc...

Clean up the Registry and then I'll install everything cautiously.

I've noticed that I have also some problems with Joomla!. For instance, Joomfish will work fine at my web site but not in my own computer's /localhost...

Would you have, by any chance, a contact with YouCMS's author?

Thanks anyway, its more than what you are here for.

Hugo

Hi

Is it the installer or the IDE it self that is the problem?

If it is the installer i will look into it, as that is my creation, but if it is the IDE that gives trouble I'm afraid I can't do anything about that.

(sorry for the late reply... the email that told me of your post had found it's way to the spam folder)

Hey,

no problem, sometimes good e-mail get to spam folders here too :)

What is not working is the IDE, Installer is running all right.

I finally got to the root of the problem, its the .NET install that wont uninstall, repair or otherwise. Even when I try to go back to a previous state it wont allow me to do that. I've seen the owner of the app and folders, it is TRUSTED INSTALLER, and wont let me change ownership to Administrator...

BTW I've tried to uninstall .NET in the many ways Microsoft tell us to. But all the methods involve deleting the .NET folders.

I'm reinstalling Windows :(...

Thanks anyway.
