## RSS Feed Burner subscription email on Joomla 1.5

Posted by lcdservices - 2007/10/22 13:29

---

In the Joomla extensions directory, the feed burner subscription email module is listed as 1.5 compatible. I had no problems installing it, but am unable to get it to actually work.

The module appears, I can enter my email and click subscribe, the captcha window opens, I receive the confirmation email from feed burner, but it doesn't actually register my subscription. When I go to my feed burner account, it says there are no subscribers, and I'm not getting daily emails.

Anyone else have issues with 1.5?

\*\*\* Update \*\*\*

Scratch this post. It looks like it's working. On the feedburner account page, you view your email subscribers through the publicize tab. The main "subscription" count is RSS feed subscribers, not email subscribers.
