
Feedburner RSS Email

Posted by si2010 - 2010/03/12 23:29

Will the Feedburner RSS Email module work on a member only site, i.e. everything at a registered user level, as the core syndicate module apparently does not?

Neither your site nor JED mentioned the need for FriendConnect before installing the Feedburner RSS Email module. I'm developing a member only site that does not want advertising so a requirement like this rules out using the module. Is FriendConnect essential?

The readme.txt referred to a tutorial on vivociti's website. I couldn't find it - where should I look?
