
Compatible with joomla 1.5?

Posted by mimmo1949 - 2010/03/04 09:01

I just installed the IDE and tried the simple tutorial on creating a new template: I soon realized that the tool seems not to work with joomla! 1.5 (I received an error message stating that mosMainBody() was not found!).

Any info from users or developer about such issue?

Thanks,

mimmo:(

you need to download separate Joomla 1.5 taglist or you can use youcmsandblog installer utility
