
Module Save

Posted by haresh - 2007/11/04 07:04

I cannot get the module to save after I have added the information required. There is a small "error on page" in the lower left corner when I hit SAVE, CLOSE, APPLY. The only thing that works is the HELP.

Its the Adbrite Multi Display Type Mode module. When you attempt to save, close, apply it says that there is an error on the page in the lower left corner of the IE window

hi haresh,
It is document.adminForm.task is null javascript error.

As I know this s been related to legacy javascript with IE in Joomla admin com_modules itself in handling some 3rd party modules (some works well some hit same problems).

Anyway, you can use Firefox to set and it works well.
