
Facebook Like Box

Posted by efra - 2010/05/25 07:22

This thread discusses the Content article: Facebook Like Box

Easy to use.... Thanks:laugh: :laugh: :laugh:

Is there a way I can install multiple Like Boxes on one web page? I know it's a strange question, just want to know if it's possible and if it is, how?

i think you are planning to install the same module but for different page ?
if that the case is not weird :-)

you can try following steps but pls take note that I havent tried it out:

1. login to back end
2. go to Module section and select Facebook Like Box module and click on Copy button
3. Joomla will create a copy of the same module, you can rename etc.
4. Click on the copied module and maybe you can set the Page ID to a different page.

think this should work out nicely.

hope it help.

rgds,

is there a way to change the colour of the text in the updates box? as you can see on my page, the dark grey text is very hard to read

www.goldcoastwaterski.com

thanks

brad.

hi,

have not played much with the css yet and maybe you can find it from facebook if there is a way to customize the css for your own.

i have quoted some part as an example (using Firebug), as you can see , is controlled by UIStory_Message class comes directly from Facebook.

Memberships are now due!!

the Joomla mod itself is very plain and no css hardcoded and this is going to be even more cool if you can customize its css directly from your facebook page.

pls share with us if you have managed to do so.

thanks !

sunwu

Hello,

Nice module. Is there a way to add module suffix to use template styling parameters?

Regards,

Faraz

Hey faazz,

I wanted also add a css class suffix to the module. I solved this by adding a plus line in the *.xml file.

In the mod_facebook_like_box.xml, before the closing tag, I added this:

It works perfectly.

I have a question. I have seen that the little thumbnails of the Facebook fans disappeared from the module box (also on vivociti.com). Is this a problem of my browser/network/etc.. or is it a global bug? Thank you forward for the answer.

hi pdstudio,

that css looks cool.

yep, for disappering of all fans' photos, original Facebook shown same problem as today I tried it, check here :
<http://developers.facebook.com/docs/reference/plugins/like-box>

stay tune and anyone has solution of this, pls share and if neccesaries, I will release new patch for this mod

updated (15 June 2010):
hey guys, those Facebook's avatars are displayed back and kicking again ! :)

@ pdstudio,

I really would like to change the css of the module. I tried what you have suggested, but unfortunately I'm not to good with CSS. It would be great if you could let me know a bit more in details how I could change the .css file to have more control over the module.

Thanks,
siki

Very nice mod.
Is there a way to change the size of fans profile pictures?
Thanks

hi there,

i have this fb like box set up on my joomla site and face one small issue:

in the fb feed module only the own messages are shown, not the ones from friends.

on fb, default view is to display all in the feed.

how can this be changed in the module, i did not find anything similar in the settings.

cheers
tamas

Facebook like box don't validate with webstandards

Posted by terjenor - 2010/10/27 17:16

I just installed the Facebook like box for joomla 1.5.
Unfortunately the extension don't validate with webstandards.

I get this message when I check the website at <http://validator.w3.org/>

Validation Output: 1 Error
Line 893, Column 267: there is no attribute "allowTransparency"

```
...overflow:hidden; width:292px; height:255px;" allowTransparency="true">
```

"You have used the attribute named above in your document, but the document type you are using does not support that attribute for this element. This error is often caused by incorrect use of the "Strict" document type with a document that uses frames (e.g. you must use the "Transitional" document type to get the "target" attribute), or by using vendor proprietary extensions such as "marginheight" (this is usually fixed by using CSS to achieve the desired effect instead)."
.....

Do you have a fix?
