## Facebook Like Box Question - HTTPS

Posted by aclutter - 2011/02/18 12:06

---

Thanks for this awesome module. However, I am using the module on an https website. When I refresh I get an error message asking if I want to view the non-https information. Is there anyway to by-pass this error and use the module in an https environment?

Thanks!

hi,

i havent tried it on https.

from original Facebook plugins code which this Joomla module extends, I havent figure out any possibility to set http or https mode either.

has other member here experienced or solved this problem ?

you may post or search for solution directly from:

<http://forum.developers.facebook.net/index.php>

let me know if there is any & i can release new version to support.
