
adbrite can\'t save settings

Posted by sfraise - 2007/11/22 08:33

Hi, I just installed the adbrite module for joomla 1.0.13. It seemed to install ok but when I try to change the module setting (banner size, sid id, ect.) it won't save, I just get a small error at the bottom of my browser.

Any idea on this?

- sorry, just found the other post regarding this issue, firefox did the trick.
