
Vivo chart

Posted by ketkoota - 2008/02/20 21:54

I've installed the Vivo Chart mambot into Joomla 0.1.13 successfully, but the code is not being translated into charts in the rendered articles. I'm using the example code:

```
{vivochart}cht=p3&chd=t:90,49&chs=350x150&chl=Foo|Bar{/vivochart}
```

The code itself appears in the article instead of the chart. I've installed and published the bot.

Any troubleshooting ideas?

hi, you missed / for closed tag:

```
{vivochart}cht=p3&chd=t:90,49&chs=350x150&chl=Foo|Bar{/vivochart}
```

I'm having the same issue (didnt want to start a new thread when one exists).

I'm using the code :

```
{vivochart}cht=p3&chd=t:90,49&chs=350*150&chl=foo|bar{/vivochart}
```

The plugin is enabled, and the code is in a content item. I've tried putting the code in without a wysiwyg editor, and with (using source button and without), but the article still just displays the code.

Using Joomla 1.5.1

Cheers

hi, thanks for spotting this problem for legacy mode. If you are using Joomla 1.5, please download Joomla 1.5 Native version from here

Hi there vivociti, thank you for this great plugin you've made. Although i want to ask for your permission to make some modifications to the code, the main reason is that your css code is not XHTML compliant (yeah i know you done it because IE6) but still, compliance is a major goal for my site.

Waiting for your reply..

hi Kovenant,

well...I admitted and you have the point...ha.ha
could be the ripple effect cause till today, Joomla itself is still fighting for this compliance, even 1.5

I welcome you to make the modification and submit back to this community.

Since it is GNU/GPL you can attach your own CopyRight license to the source code and modify it but as long you dont remove original author copyright from the source.

I m looking forward to your new version.
V community should welcome your contribution :)
