
browse in 35 langs error

Posted by norfolkandway - 2008/10/02 15:51

Hi - great module, thanks!
only problem I have is :-
seem to be able to translate once only the error url is returned -
please see www.polakwuk.net and try changing languages twice
Any help is much appreciated.

Hi all
Ive just installed this mod and im getting the same problem. Whenever you try and change the language twice in a row it errors out. i can understand that its not likely that some will do this but would be nice if it could be looked at just in case.

Thanks

Muzzy

p.s. very good mod!! ive been trying to get one of these working for a while now.

I have a problem also. When installing I get an XML setup file missing error. Is there a solution for this?

I am getting this error as well. Anyone out there have solution?
Thanks.

The error is:
Error! Could not find an XML setup file in the package

hi,

when you/your vistor clicks on translate button, basically it will send you to Google Service to do the translation. so the 2nd time if you click on the translation again, get an error from Google Translate service because it s trying to translated url.

maybe next release i should make it popup to other new window, so if you need to translate to other lang again, you can click on your original website translate button again.
