
module class suffix for facebook like

Posted by elizabruml - 2012/04/12 11:47

Can you please explain how to add a module class suffix to this module. I see a previous post from over 18 months ago raising this issue and adding a line to the parameters in the module xtm file but I am not sure exactly what to add and exactly where. Your help would be much appreciated.

hi elizabruml, no, our facebook module does not have setting to add class suffix and will only follow default class module from template itself.
