## running your extension in a horizontal way - demo

Posted by unleash - 2012/04/25 12:14

---

good day dear friends - hello dear developer!

i currently plan a site that wants to use the FanBox- but as needed for my site i need it to have in a special position -

Let me show you this position and the efforts and needs with a template-tutorial:

[wiki.joomlart.com/wiki/JA\\_Template\\_Framework/Guides](http://wiki.joomlart.com/wiki/JA_Template_Framework/Guides)

and here i think of placing your FaceBook-Extension in the position that i show you here:

```
# ja-main
```

```
content-mass-top  
.ja-mass  
.ja-mass-top
```

question: can i run FaceBook-extension in such a "Horizontal" mode!? Is this possible?!

Note: The above mentioned positions are somewhat "horizontal" ones - not "vertical" ones.

The FaceBook-addon would be buildt into this position in a horizontal manner - not in a vertical one!

Is this possible - is it doable!? Love to hear from you

greetings

```
