## Pleas help me-What is YouCMSAndBlog Module Generat

Posted by serendipityrose - 2008/07/30 18:40

---

I'm sorry to barge in here with this odd question but I am working like crazy to get another joomla component to work and all of a sudden this popped up from seemingly nowhere and I can't figure out what it is much less how to get rid of it! I do remember coming to this site and downloading something and apparently installing it but hadn't had a chance to figure it out. I think it was something I was going to use for blogger? I don't remember. It is VirtueMart that I am trying to get working correctly so since this appeared while I was trying to get the VM and joomla login to work correctly I'm wondering if it has anything to do with it because I am having absolutely no luck anywhere!

If someone could tell me what this is, where to find the plug-in or whatever it is so I can disable it I would love you forever!

You can see it right on my front page. <http://thefuninlearning.com>

Thank you !  
Rose
