YouCMSAndBlog

Posted by gresham - 2007/10/05 00:24

_____

Hello, Im trying to test the editor. I have edited the configuration.xml to point to my joomla installation. From YouCMSAndBlog i can click on the launch browser button and view the joomla site, but i cannot view the template in the editor. It is just a blank page. I changed mode from off to trueview but still nothing happened. Please help i would really love to try this out, it seems like just what i was looking for.

_____

hi,

main possibility:
1. you have a personal firewall and it blocks the IDE from accessing your localhost http.
You have to give it access otherwise YouCMSAndBlog couldnot reach your localhost http

2. 2nd possibility but not really looks like related to your problem:
you have to set your current editing template to be the default template in your Joomla admin page.
You may refer to this short tutorial.

Hope it helps.
