
Joomla Taglist file not found.

Posted by gutberle - 2011/11/29 09:04

Hi All,

I want to try out YouCMSAndBlog IDE and while the IDE itself and the two Joomla plugins can be downloaded just fine, the download for the Joomla Taglist file generates a file not found message. - Could you please have a look and possibly let me know where I can download this file?

Also, could you please tell me if this taglist will work with Joomla 1.5.23/.24/.25 or if it will only work with the very early versions of Joomla 1.5 such as Joomla 1.5RC3 as the taglist file name implies?

Regards,
Ingmar

yes, it works for joomla 1.0 and joomla 1.5

in fact, I hope someone who has used youcmsandblog and has created taglist for joomla 1.6 and 1.7 ? if have can share with everyone here and i can help to publish to vivociti download directory.

rgds,

Hi sunwu,

thanks for your reply. It is good to know that the taglist would work with the latest Joomla 1.5.x versions.

However, this does not solve the problem that the taglist file does not seem to exist any longer on your server. The download link for the taglist results in a "File not found" message".

Could you please have a look and if possible, correct this problem, so I can download the taglist?

Regards,
Ingmar

thanks, i have re-uploaded.

also please find joomla taglist for 1.6/1.7, a contribution by Mykee.

Joomla 1.6/1.7 Taglist

i havent tried it out yet, please feedback or anyone feel free to enhance this taglist version.

hope everyone can benefit from it.

Mykee - thanks !
